

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (currently amended) A message distribution center ~~interposed between a source of a short message and a wireless network including an intended recipient of said short message, said message distribution center~~ comprising:

an SMTP protocol communication channel to receive said short message from said source of said short message;

a plurality of subscriber queues accessed before delivery to outside of a wireless carrier's subscriber message delivery network and each corresponding to a different subscriber in said wireless network, said short message being placed in at least one of said plurality of subscriber queues before delivery to said wireless carrier's subscriber message delivery network; and

an RMI or SMPP communication channel to communicate said queued short message to said wireless carrier's subscriber message delivery network.

2-3. (canceled)

4. (original) The message distribution center according to claim 1, wherein:

each of said plurality of subscriber queues operates in a first in-first out fashion.

5. (original) The message distribution center according to claim 1, further comprising:

a predetermined maximum number of short messages in each of said plurality of subscriber queues.

6. (currently amended) The message distribution center according to claim 1, wherein:

said wireless carrier's subscriber message delivery network is a wireless intelligent network (WIN).

7-16. (canceled)

17. (currently amended) A method of message distribution between a source of a short message and a wireless network including an intended recipient of said short message, said method of message distribution comprising:

receiving said short message from said source of said short message utilizing an SMTP protocol communication channel;

placing said short message in at least one of a plurality of subscriber queues accessed before delivery to ~~outside of~~ a wireless carrier's subscriber message delivery network ~~before delivery to said wireless carrier's network~~, said plurality of subscriber queues each corresponding to a different subscriber in said wireless carrier's network; and

communicating said short message to said wireless carrier's subscriber message delivery network utilizing an RMI or SMPP communication channel.

18-19. (canceled)

20. (previously presented) The method of message distribution according to claim 17, wherein:

each of said plurality of subscriber queues operates in a first in-first out fashion.

21. (previously presented) The method of message distribution according to claim 17, further comprising:

placing a predetermined maximum number of short messages in each of said plurality of subscriber queues.

22. (currently amended) The method of message distribution according to claim 17, wherein:

said wireless carrier's subscriber message delivery network is a wireless intelligent network (WIN).

23. (currently amended) An apparatus for message distribution between a source of a short message and a wireless network including an intended recipient of said short message, said apparatus for message distribution comprising:

means for receiving said short message from said source of said short message utilizing an SMTP protocol communication channel;

means for placing said short message in at least one of a plurality of subscriber queues accessed before delivery to ~~outside of~~ a wireless carrier's subscriber message delivery network ~~before delivery to said wireless carrier's network~~, said plurality of subscriber queues each corresponding to a different subscriber in said wireless carrier's subscriber message delivery network; and

means for communicating said short message to said wireless carrier's subscriber message delivery network utilizing an RMI or SMPP communication channel.

24-25. (canceled)

26. (previously presented) The apparatus for message distribution according to claim 23, wherein:

each of said plurality of subscriber queues operates in a first in-first out fashion.

27. (previously presented) The apparatus for message distribution according to claim 23, further comprising:

placing a predetermined maximum number of short messages in each of said plurality of subscriber queues.

28. (currently amended) The apparatus for message distribution according to claim 23, wherein:

said wireless carrier's subscriber message delivery network is a wireless intelligent network (WIN).
